

## ViAge™ Age Verification Control For the Point of Sale

### Big Problem ... Simple Solution

While most everyone takes precautions when checking identification, it only takes one "slip-up"; and you can be facing penalties that could severely threaten the financial health of your establishment.

ViAge CAV-3500 Age verification scanner is an integral component of the comprehensive Point of Sale System, helping to prevent the sale of alcohol, tobacco, and other age-restricted items to minors, and at the same time, scan UPC barcode. It takes the guesswork out of determining a customer's age and combines functionality so you save cost and counter space. By a simple swipe or scan of a state-issued identification card, the scanner calculates and displays the age and

ID information on the LCD screen. CAV-3500 also sends date of birth data to the POS terminal to automate the birthday prompt. This helps cashiers automatically comply with product age restrictions.

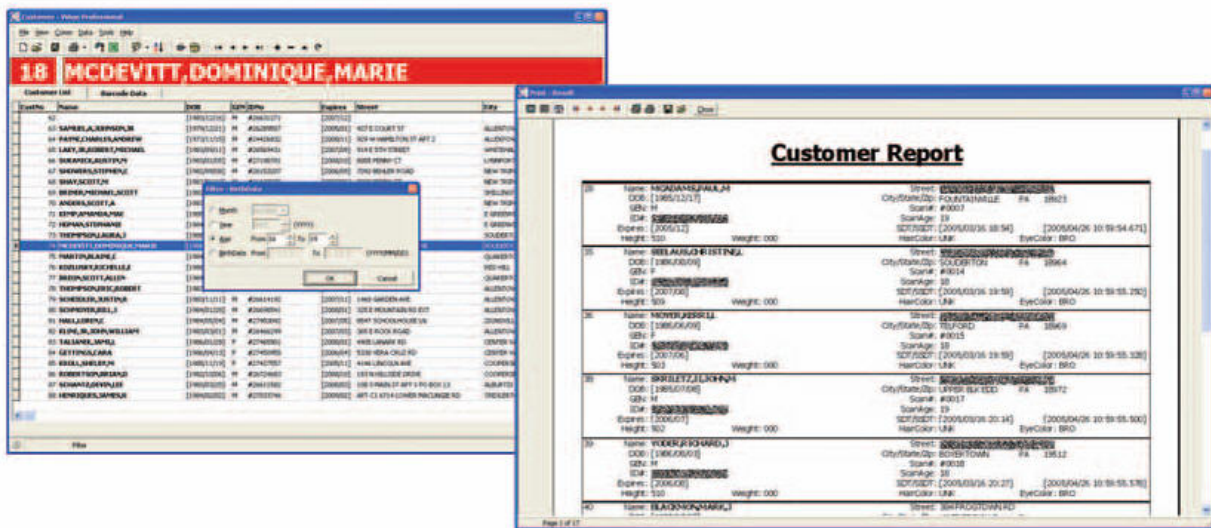

### Seamless Integration

ViAge age-verification multi-purpose scanner can be part of your Point of Sale System. ViAge is pre-configured to guarantee seamless integration to new and existing G-SITE, PASSPORT, RUBY, AUTOGAS, DATASYM, and DRESSER WAYNE users through "Plug-N-Play" out of the box implementation.

## Simple Operation

The cashier simply swipes a magnetic stripe license or scans a 2-D license when its time to check IDs. The ViAge responds instantly with a calculated age on the scanner LCD screen and the cashier proceeds with the transaction. ViAge for POS performs the age verification locally on the terminal; a phone line is not necessary. The transaction is completed in less than 2 seconds, so the fast-paced environment at the point of sale is not impacted. The scanner is an all in one solution that supports mag-stripe reader and barcode as well as UPC barcode to scan items.

## Comprehensive End of the Day Report

ViAge includes a journal of a running log of the last 3,000 transactions, indicating displayed age, name, license number, birth date, expiration date, address and date/time stamp of the transaction. At the end of every employees shift, the cashier would simply turn in their Smart Card to the managers to create a Shift Report. Managers can then take the smart card and store the data to their PC for later retrieval or to create a report.

The ViAge from CardCom is simply the most effective, durable and easy to use protection against underage liquor and tobacco use. It's a small investment to make to protect your business.

## Why ViAge?

- Prevent sales of age-restricted items to minors
- Optimizes counter space by running same terminal for product scanning and Age Verification
- Supports magnetic stripe and 1D/2D barcode licenses
- Provides detailed reports for merchant records.

## POS Compatibility

- Gilbarco Gsite / Passport
- Ruby Verifone
- AutoGas
- DataSym
- Dresser Wayne
- Windows based POS Systems
